Coding Challenge - 013:
Find the Non-Repeated Values

decomposition: we examine the elements (book's names) in the list (products) one by one.

pattern recognition: the non-repeated values in the list of products or only one book in the store.

algorithm: the flowchart is on the left.

abstraction: we need to find the books that are only left 1 in the stock.

****

Coding:

```
for i in products:
    if products.count(i) == 1:
        print(i)
```
